

Kepler - Bug #3560

Color-code contents of CollectionDisplay

10/23/2008 05:53 PM - Timothy McPhillips

Status:	New	Start date:	10/23/2008
Priority:	Normal	Due date:	
Assignee:	Timothy McPhillips	% Done:	0%
Category:	general	Estimated time:	0.00 hour
Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	3560		

Description

The CollectionDisplay actor provides a live, XML-formatted view of the data stream arriving at the actor in a COMAD workflow. The window contents would be easier to understand if they were color-coded to distinguish Collections, Data elements, metadata/annotations, and provenance records, as suggested for the Trace File view of the provenance browser in bug 3555 (the color-coding should be same for both).
