<b>Description</b>			
When a selection has been selected, and then you try to click on the scrollbar, for example, to move the viewable window down, the selection becomes "unselected" and the event is not forwarded to the appropriate object. This is particularly problematic for large selections.			

### History

#### #1 - 10/27/2008 04:05 AM - Ryan McFall

This is also a problem with the individual selection window, because it doesn't work well to try to work with the "type of selection" buttons when the event seems to be swallowed up.

For this reason I am moving this up to alpha2 rather than alpha3 (although I hope it doesn't cause all kinds of trouble!)

#### #2 - 10/29/2008 04:07 AM - Ryan McFall

Fixed by adding forwarding logic to the RectangleSelected mouse listener
