

FIRST - Bug #3584

Switching wizard pages breaks previously existing selections

10/30/2008 08:07 AM - Ryan McFall

Bugzilla-Id:	3584		
Description			
To replicate, draw a header around the exam heading for doc10.pdf. Then click back to get back to the page where the types of selections are indicated. Then go back to the header/footer page.			
The coordinates of the beginning of the rectangle are being converted by Selectangle differently, somehow. Usually the y-coordinate is off by about 30 pixels.			

History

#1 - 11/09/2008 04:16 PM - Ryan McFall

Investigation of this shows that the method getFramePoint in Selectangle is returning a different point before the vector rasterization screen is shown, and after. The Selectangle point is still the same. The call to SwingUtilities.convertPoint just returns different values, for a reason that I don't currently understand. As far as I can tell, the viewer component and the result of frame.getContentPane() used in getFramePoint are the same.

This is likely going to be hard to fix.

#2 - 11/11/2008 07:08 AM - Ryan McFall

Modified milestone since I'm not going to be able to fix this by alpha2

#3 - 01/13/2009 01:09 PM - Ryan McFall

There's only one page where selections are made, and moving to the JXLayer method of doing selection should have fixed this bug.
