

Morpho - Bug #36

mde doesn't handle PUBLIC ids properly

07/03/2000 04:08 AM - Matt Jones

Status:	Closed	Start date:	07/03/2000

Target version:	Sep2000	Spent time:	0.00 hour
Bugzilla-Id:	36		
Description			
Currently, mde uses the document root element name as a PUBLIC identifier when saving documents. This is inappropriate. Instead, the PUBLIC id should be registered with the document type in the Options class when the location of the DTD is registered. With its current structure, mde generates PUBLIC ids that are not very useful for the metadata catalog.
