Bugzilla-Id:	3614		
<b>Description</b> To replicate, draw a header/footer selection, switch to the next page, and then switch back to the original page. Clicking the delete button at this point has no visible effect.  However, reselecting the header/footer selection and then clicking the button again gives rise to an assertion error, indicating that the selection couldn't actually be removed.			

History

#1 - 11/10/2008 06:46 AM - Ryan McFall

This was due to not deleting old selections from the page that were headers and footers; only single selections on the same page were being deleted. Therefore SelectIndividualText actually had two copies of that selection stored upon switching back to page 1.
