Description

Morpho currently allows users to create and save invalid doctypes locally. If
they send them to metacat, the invalid documents are rejected. We need to
enable morpho to save intermediate documents without a DOCTYPE tag and yet still
know what the intended DOCTYPE was supposed to be. This will allow us to save
the document on metacat without a DOCTYPE and then later recover it and finish
editing it as the intended doctype.

History

#1 - 12/03/2002 09:13 PM - Dan Higgins

Due to large number of places where the doctype is used in Morpho, this change
would involve changing a lot of code. We are thus postponing until more time is
available.

#2 - 01/06/2004 01:26 PM - Dan Higgins

No longer applicable with Morpho 1.5 since eml2 uses namespaces rather than
DOCTYPE. Also, eml2 validation is done locally in new TREE editor.
