#### Description

Since we moved to the new Selector code, I haven't paid any attention as to whether the selecting of question text from the PDF document works correctly.

I am certain that the selection rectangles are being drawn in the wrong spot when used within the MainWindow class. It appears that this is because of the presence of JToolBar classes. Ugh - yet another case to handle within the Selector logic.

#### History

##### #1 - 02/24/2009 06:09 AM - Ryan McFall

This should be addressed before alpha3. I'm not sure if I'll be able to get it to work in that amount of time, however.

##### #2 - 02/24/2009 07:11 PM - Ryan McFall

This seems to work correctly now, both with PDF view in the split pane, and when PDF is shown in a separate window.
