Category:	provenance	Estimated time:	0.00 hour
Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	3656		
Description			
Create a (non-gui) Provenance Client that can interact with Provenance stores.			
Among other things, this interface should be able to gather from provenance stores the items needed to create Publication Ready Archives (http://reap.ecoinformatics.org/Wiki.jsp?page=UsecasePublicationReadyArchive), query to create high level views of what's stored in provenance store(s), and delete a workflow run or a workflow and all associated runs in provenance.			
Development is initially being driven by the needs of the usecase above and those of Kepler Reporting.
