

Metacat - Bug #3680

Allow for different authentication services in metacat configuration

11/19/2008 10:13 AM - Michael Daigle

Target version:	1.9	Spent time:	0.00 hour
Bugzilla-Id:	3680		
Description			
Right now, the metacat configuration utility authenticates against ldap. It should allow for the usage of any authentication schema.			

History

#1 - 11/19/2008 10:27 AM - Matt Jones

Shouldn't the configuration utility be using the AuthInterface interface for all of its calls? That would help abstract it away from the need for a specific LDAP implementation. Maybe an additional method or two need to be added to AuthInterface to support verifying account existence?

#2 - 11/19/2008 04:51 PM - Michael Daigle

Changed the configuration authentication to use the generic AuthSession. Added the auth class to the configuration utility. Updated install/update documentation to reflect the changes.
