#### Description

When I look at a specimen on the SE Atlas such as NCU-75254 and it gives the name as *Magnolia virginiana*, that is simply how we track the current best name. Then there are two determinations (Meyer 1990 and Tober 1992), and they are shown in full. The collector was Ashe in 1897 and he probably did assign a name and it is not shown. Specify stores this as 'original label taxon' and we need to add that field to the other fields shown in the label display, perhaps immediately below collectors.
