Description

When inserting a document to the metacat database, mde provides a SYSTEM id for the DTD that is resolved to a local URI. This is problematic because this URI is not accessible to metacat, and therefore there is no way for metacat to retrieve the DTD and register the new document type. This is not a problem for document types that are already registered, because metacat ignores the system id provided. Through what mechanism are we going to allow mde to register new document types? Maybe through the options interface when DTDs are associated with the editor?

History

#1 - 07/25/2000 09:02 AM - Dan Higgins

Public ID now assigned through Options class in mde. Metacat should ignore the system ID if proper Public ID assigned? (Dan Higgins)

#2 - 08/20/2000 08:43 PM - Matt Jones

moved bug to dmanclient product

#3 - 04/09/2001 06:07 PM - Matt Jones

Lowered priority because we might drop MDE and replace it with another editing solution.

#4 - 06/29/2001 10:55 AM - Dan Higgins

no longer applicable

#5 - 03/27/2013 02:13 PM - Redmine Admin
