

Metacat - Bug #3712

Allow for customization of backup directory location

12/17/2008 04:31 PM - Michael Daigle

Status:	Resolved	Start date:	12/17/2008
Priority:	Normal	Due date:	
Assignee:	Michael Daigle	% Done:	0%
Category:	metacat	Estimated time:	0.00 hour
Target version:	1.9	Spent time:	0.00 hour
Bugzilla-Id:	3712		
Description			
Right now the backup location defaults to /var/metacat/.metacat on linux/mac and C:\metacat\metacat on windows. This should be changeable at configuration time.			

History

#1 - 12/29/2008 09:23 AM - Michael Daigle

added a screen to choose the backup file location. Added discovery code to look in a system dir and user dir for existing backups.

#2 - 03/27/2013 02:24 PM - Redmine Admin

Original Bugzilla ID was 3712
