

Metacat - Bug #3721

Some empty EML elements cause validator to fail

01/05/2009 11:24 AM - Michael Daigle

<b>Bugzilla-Id:</b>	3721		
<b>Description</b>			
Some elements have to be populated if they exist in the doc. The registry currently creates them as empty elements and the doc fails.			
Some of these elements are:			
shortName, title, language, series, keywordThesaurus, name, definition, defaultValue, mediumName, mediumDensity, mediumDensityUnits, mediumVolume, mediumFormat, mediumNote, onlineDescription			

History

#1 - 01/06/2009 12:26 PM - Shaun Walbridge

Image of the completed form used by Chooyan to generate the EML SAX validation error.

#2 - 01/06/2009 12:29 PM - Shaun Walbridge

Registry wasn't validating inputs for either data medium or usage rights. With the stricter requirements of EML 2.1, this caused a SAX validation error. I've added form validation requirements for these two fields in [r4730](#).
