

## Morpho - Bug #3737

### Morpho generated tables have a confusing name

01/09/2009 03:00 PM - Shaun Walbridge

#### Description

When data tables are created through the Morpho interface, the <objectName> element of the resulting data table is '~deletemeNNN', which isn't particularly helpful. It seems to be derived from the creation in: morpho/plugins/datapackagewizard/pages/DataLocation.java, line 655

This name should instead match the name entered by the user on table creation.

#### History

##### #1 - 04/30/2009 05:02 PM - Jing Tao

This objectName is created when user use "Create" option in import data file. This means, user will type something in a blank table. So the file name, which always is the objectName, looks weird.

Talked with shaun, he doesn't like the "delete" word there. The word may make user to delete the file :)

We come up a quick and short term solution: use some thing like unnamed-table-1 to name the object name.

Later, we may give user a GUI to fill this field.

##### #2 - 09/03/2009 03:34 PM - Jing Tao

We come out a solution with Shaun.
