Morpho - Bug #374

dtd parser cannot handle multi-rooted dtds

12/16/2001 04:51 PM - Dan Higgins

Bugzilla-Id:	374			

Description

Currently, the dtd parser uses its bultin abitlity to 'guess' the root element
of a dtd. This does not work when there are unreferenced elements in the dtd (or
the dtd is really multirooted). Code should be changed to provide a root node
for the dtd parser to start from when it is generating document templates from
the dtd.
