

Metacat - Bug #3773

Remove places where document is read into memory

01/23/2009 10:24 AM - Michael Daigle

Status:	New	Start date:	01/23/2009
Priority:	Normal	Due date:

Target version:	Unspecified	Spent time:	0.00 hour
Bugzilla-Id:	3773		
Description			
There is at least one place where metadata is read into memory. This is done when the doc needs to be written to disk.			
This needs to be changed to a buffer. Any other places should be changed as well.
