

Metacat - Bug #3780

Register dataset with data file fails on saeon skin

01/27/2009 08:36 AM - Michael Daigle

Bugzilla-Id:	3780		

Description

Registering a data set on the saeon skin with a data file fails. It comes back with the following error: "Failed to upload file. Error was:"

The metacat log has:

```
IO exception which writing temporary file: null /var/metacat/temporary/discoverBackup.txt (Permission denied)
[edu.ucsb.nceas.metacat.MetaCatServlet]
```

It looks like the registry code and metacat code are trying to write the same file. Since the registry writes it as the Apache user, metacat cannot (and should not) change it.

History

#1 - 01/27/2009 10:31 AM - Michael Daigle

Changed the MetacatUtil.writeTempFile to write to an "upload" temp directory to avoid conflicts with the registry code.
