#### Description

Reported by Edward Lee:

The Kepler icons seem to be sized so that Vergil's snap-to-grid doesn't really work. If I connect an output port to a relation to an input port, I can't get the connections to give me straight lines. This is rather unfortunate, as it makes all Kepler diagrams look a bit sloppy. This can be fixed by resizing the Kepler icons to match the default size in the basic Vergil editor for Ptolemy II.

#### History

##### #1 - 01/29/2009 04:46 PM - Christopher Brooks

Edward writes:

I'm not totally sure, but I seem to recall that if the bounding box of the icon is any multiple of 5 (5 something... I'm not even sure what the units are), then alignments will all work...
