#### Description

When creating an analysis database, we need to configure which taxon names get attached to plots: with authority or without (default), as well as making sure the current interpretation is selected, unless someone wants original for some reason. The last bit is lower priority: current interpretation should go by default and configuring that is less importance.

We also need to include the "level" field that indicates the quality of the taxon to allow for searching/sorting by quality of taxon.

#### History

##### #1 - 11/09/2009 01:17 PM - Michael Lee

the current name gets attached, which is fine.

##### #2 - 03/27/2013 02:24 PM - Redmine Admin

Original Bugzilla ID was 3804
