

Metacat - Bug #3814

Backed up directories are not getting read during configuration

02/09/2009 05:16 PM - Michael Daigle

Status:	Resolved	Start date:	02/09/2009
Priority:	Normal	Due date:	
Assignee:	Michael Daigle	% Done:	0%
Category:	metacat	Estimated time:	0.00 hour
Target version:	1.9	Spent time:	0.00 hour
Bugzilla-Id:	3814		

Description

Once metacat is configured after the initial installation, the configured values should be saved. The global properties section is saving correctly, except for the directory locations (data, inline data, logs, etc). It looks like those are getting populated by the backup directory auto-discovery mechanism.
