

## Metacat - Bug #3853

### Make sure the sbclter and pisco skins work with token replacement

03/02/2009 09:51 AM - Michael Daigle

<b>Status:</b>	Resolved	<b>Start date:</b>	03/02/2009

<b>Bugzilla-Id:</b>	3853		
<b>Description</b>			
Work with Margaret to knock out the remaining display issues on the sbclter skin.			

#### History

##### #1 - 03/03/2009 09:59 AM - Michael Daigle

Email I sent to metacat developers:

I had to make a few changes to the way the sbclter skin works, mostly because the style/shared/eml-2.0.0/eml.xml file tries to import files from the skins directories. This worked when we used token replacement, but doesn't work with variables. I will need to make similar changes to the pisco skin to make that work, so Chris, can you take a look at what I've done for sbclter and let me know if it's okay to make the same changes to pisco?

What I've done:

- Created a style/shared/eml-2.1.0 directory that is a copy of the eml-2.0.0 directory (needs to be updated for 2.1.0)
- Created style/skins/sbclter/templates/xsl/sbclter-eml-2.0.0.xml and sbclter-eml-2.1.0.xml which do local includes and header template calls and import the shared eml.xml files.
- Pointed /style/skins/sbclter/sbclter.xml to the appropriate sbclter-eml-2.X.X.xml file

What I propose for the new EML-UTIL module that we will create post release:

- Rename the /style/shared directory to /style/common-css-layout
- move the /style/common-css-layout code into the EML-UTIL module in svn (tag 2.0.0 code with old tags)
- check out the common-css-layout from EML-UTIL at metacat build time (like we do now for common)
- Rename the /style/common directory in EML-UTIL to /style/common-table-layout
- If needed, extract any truly shared generic code from /style/common-X-layout directories into a shared directory.

##### #2 - 03/16/2009 01:08 PM - Michael Daigle

Updated the SBCLTER skins with margaret. Chris said to leave pisco. They would make it work with an existing skin.
