Description

In MainWindow, right now if the user closes the window via the system close command, MainWindow will close without saving the document. It's desirable to be able to do this, but the user should be warned if they do this; otherwise they will potentially lose lots of work.

We'd also like the user to be able to exit without saving via the File menu. This should execute the same code that clicking on the system close button does, so that we handle both of these cases uniformly.

History

#1 - 04/01/2009 07:38 AM - Sandeep Namilikonda

Appropriate changes made to MainWindow.java:

- prompt a yes/no confirm dialog box to the user on window close event providing a chance to the user to save the work
- add an "exit without save" option to file menu
