

## Metacat - Bug #3881

### Replication not working between KNB and LTER metacats

03/11/2009 01:13 PM - Michael Daigle

| After the 1.9.0 upgrade on knb and lter, docs are not replicating from knb to lter. Jing is working with Duane C to resolve this issue. |           |                        |            |

#### History

##### #1 - 03/11/2009 01:21 PM - Jing Tao

LTER changed the host name of metacat. But the certificate and the host name in knb xml\_replication has not been updated. We think this is the reason why replication failed. We are waiting to restart tomcat after changing certificate which Duane just created today.

##### #2 - 03/11/2009 06:07 PM - Jing Tao

After getting the new certificate issued for metacat.lter.net.edu and change the server to metacat.lter.net.edu:8443/knb/metacat/servlet/replication in knb xml\_replication, tomcat of knb was restarted.

I used morpho to insert an new eml 210 doc, then the doc can be searched and read in both knb and lter. I deleted the doc in knb and lter one was gone too.

So i think the replication is working now.

##### #3 - 03/12/2009 10:40 AM - Jing Tao

Got email from Duane and the replication seemed working.
