#### Description

In the new 1.9.0 knb metacat, it seems the replication log files' name are changed. Somehow the error log file is empty - but it shouldn't since we know some eml documents were not replicated successfully.

Duane sent us an email with a replication error log file. That file is not empty and this means that the replication error log works on lter metacat.

#### History

##### #1 - 03/16/2009 01:24 PM - Michael Daigle

There are several errors in ReplicationHandler that only report to the metacat log. These should report to the replication log as well.

##### #2 - 08/04/2009 02:48 PM - Michael Daigle

Changed replication logging to use log4j rollingfileappender. Changed all replication logging to use this appender.
