Description			
<p>On my mac, when I enter fullscreen mode, then hit the ESC key to leave fullscreen mode, I get an NPE and the window closes. I haven't tried another OS or had anyone replicate this yet.</p> <p>Error: [run] Exception in thread "AWT-EventQueue-0" java.lang.NullPointerException [run] at ptolemy.vergil.basic.ExtendedGraphFrame.cancelFullScreen(ExtendedGraphFrame.java:115) [run] at ptolemy.vergil.basic.ExtendedGraphFrame\$FullScreenAction.actionPerformed(ExtendedGraphFrame.java:264) [run] at javax.swing.SwingUtilities.notifyAction(SwingUtilities.java:1576) [run] at javax.swing.JComponent.processKeyBinding(JComponent.java:2772) [run] at javax.swing.JComponent.processKeyBindings(JComponent.java:2807) [run] at javax.swing.JComponent.processKeyEvent(JComponent.java:2735)</p>

Has duplicate Kepler - Bug #2369: Scrollbars Disappear After Using Fullscreen...		Resolved	02/24/2006

History

#1 - 03/18/2009 01:06 PM - Christopher Brooks

The bug does not appear if I do
ant change-to -Dsuite=ptII
ant run # Open any model # View -> Full Screen # Hit the Escape key

The bug also does not appear in \$PTII/bin/vergil in a regular Ptolemy II devel tree (outside of Kepler)

I suspect that the recent refactoring of BasicGraphFrame to have an init() method might have something to do with this, but this is only a guess.

#2 - 04/03/2009 04:54 PM - Derik Barseghian

This bug is pretty atrocious, I'm retargeting it to 2.0.0.

#3 - 04/22/2009 03:48 PM - Chad Berkley

same as 2369

- This bug has been marked as a duplicate of bug 2369 ***
