Description

Hello,

I am using kepler with eclipse. I followed this tutorial:
https://kepler-project.org/developers/reference/kepler-and-eclipse/?searchterm=None

When I run kepler as java application, it loads but no actors are there in right pane. I can just find the categories name (e.g. Component->Data Input->Local Input).

I tried by deleting ~/.kepler directory too, but no way.
Can you help me out?

This is not a bug, but a configuration problem. I've asked David to help the user with this problem.
