Target version:	client-prototype	Spent time:	0.00 hour
Bugzilla-Id:	3914		
Description			
When I try to associate a keyword to an assessment item or the assessment itself, the morpho interface generates the following error.			
Error message reads: "Parser config file threw: java.net.MalformedURLException"			
Is this a known issue? Is this something specific to my config.xml file?

this is working for me.
you may be missing the bloom thesaurus xml file.
is there a more detailed stacktrace given in the console output?

#2 - 04/23/2009 10:51 AM - ben leinfelder

This was a bug that we encountered in Morpho, as well.
Jing fixed it. Apparently it only shows up in Windows systems because of back vs. forward slashes being used for looking up the vocab from the library.
I've gotten the morpho fix, and updated the jar we're using in the first distribution.
