Metacat - Bug #3920

ldapweb should use the correct location for 'organization' properties

03/26/2009 02:21 PM - Shaun Walbridge

Description

To work around issues with modifying metacat.properties post-deployment, the UCNRS organization properties (including most importantly the password) have instead been stored in the skin-specific nrs/nrs.properties file.

Once we've figured out a good final location for the organization properties (or perhaps a way to query for them as per #3104), revert the code which detects NRS-specific properties directly (marked with an 'XXX HACK' block).
