FIRST - Bug #3924

Searching for choices in multiple choice question can cross question boundaries

03/31/2009 01:09 PM - Ryan McFall

Description

In doc10.pdf, if the user selects the labels for question 28 as part of user-specified images, then it seems like the MultipleChoice question type is searching for options, and doesn't stop searching until it finds some. In this particular case, this causes it to go past the boundary for question 28 and into question 29.

It seems like it would be best to stop when it sees the next question number in sequence and give up looking for choices, rather than compounding the error by combining two questions incorrectly.

History

#1 - 04/02/2009 04:05 PM - Sandeep Namilikonda

I noticed this behavior (Questions 28 and 29 merged)only if I select all the choices of Q28 together as a single image! Further, the image also gets associated with Q30.
