<b>Target version:</b>	3.X.Y	<b>Spent time:</b>	0.00 hour
<b>Bugzilla-Id:</b>	3936		
<b>Description</b>			
When images (currently file paths) are passed between actors, I believe provenance captures the file contents and stores it. When looking up that token value from provenance, we should be able to generate the image and add it to the report.			

### History

#### #1 - 04/03/2009 10:43 AM - ben leinfelder

now handling file paths (strings) that are returned from provenance.

this is less than perfect since it relies on the filesystem still having the image file on disk when the report is rendered. i believe provenance was extended to save BLOBs for the files if a valid path was the token value.

BUT...it does work right now!

#### #2 - 06/15/2009 02:54 PM - ben leinfelder

we are able to serialize to the XML file - even better!
