

## Morpho - Bug #3940

### docid collisions, even if data packages have different scopes

#### Description

During a workshop, several users created data packages using their own names as the scope. Network connectivity was intermittent, so these were not saved to a network. Instead I copied data packages files (i.e., the directory with the named scope) from the users local homes onto one computer for later upload. This resulted in a .morpho/profiles/myProfile/data/user1, user2, etc.

Start Morpho and choose Open existing dataset"

If the directories user1 and user2 both contained a document with the same id (e.g., 3.x), then Morpho would not display the second one in the list of available data packages.

After renaming the unseen file to a unique value, e.g., 4.x (and also its packageId and any data table ids) Morpho displayed it in the list.
