<b>Description</b>			
The XSLTActor creates a temporary file in the current directory for storing the input XML file to be processed. This files should be created in the system temporary file directory using the method "createTempFile" in Java.io.File.			

#### History

---

**#1 - 04/10/2009 05:32 AM - Chris Weed**

The file XSLT.java has the same problem for the output html file "fileOut".
