

Kepler - Bug #4003

Support for non-GUI Kepler installer.

04/21/2009 09:12 AM - jianwu jianwu

Status:	New	Start date:	04/21/2009
Priority:	Normal	Due date:	
Assignee:	jianwu jianwu	% Done:	0%
Category:	installer	Estimated time:	0.00 hour
Target version:	3.X.Y	Spent time:	0.00 hour
Bugzilla-Id:	4003		
Description			
Many users need to install Kepler on a cluster or other distributed environments where they do not have a GUI. So it would be nice if we support Kepler no-GUI installation. An ideal way is to provide a Kepler rpm package.

One workaround for this is to have IzPack use

<panel classname="FinishPanel"/>

instead of

<panel classname="SimpleFinishPanel"/>

FinishPanel will create a auto-install.xml file which can be run with

java -jar installer.jar auto-install.xml

See

<http://izpack.org/documentation/advanced-features.html#automated-installers>

For information about building a Kepler installer, see

<https://kepler-project.org/developers/teams/build/building-kepler-installers/?searchterm=installer>
