Description

The documentation fails to mention the need for a dependency on tools.jar in setting up building Kepler with Eclipse in Windows.

Since tools.jar is not by default a dependency in the JRE path, the build will give errors about a missing dependency on com.sun.javadoc in KarDoclet.java.

The steps to fix this in eclipse are:
1. Windows -> Preferences -> Java -> Installed JREs
2. Select the default JRE -> Edit -> Add External Jars -> [Path to JDK]/lib/tools.jar
