Kepler - Bug #4036

WRM - connect to configurable provenance store

04/29/2009 03:11 PM - ben leinfelder

Status:	Resolved		**Start date:**	04/29/2009
Priority:	Normal		**Due date:**	
Assignee:	Derik Barseghian		**% Done:**	0%
Category:	provenance		**Estimated time:**	0.00 hour
Target version:	2.0.0-alpha1		**Spent time:**	0.00 hour
Bugzilla-Id:	4036			

Description

Currently the WRM viewer connects to the default provenance store specified in a .properties bundle in the WRM module. Unless this store exists and is being used by workflows, connecting to it will fail.
Phase 1:
-The viewer should attempt to connect to the provenance store that is configured for the workflow that is currently open (it may or may not have a provenance store enabled).
-If the workflow does not have a provenance store configured, then the bundle can be used.
Phase 2:
-see next bug

Made a little progress - on the mac (and probably works on linux) the WRM now uses the top level recorder settings if it's turned on, the properties bundle if not. Every time you do a search wrm first checks to see if there has been a change. Doesn't work on windows yet, but shouldn't be hard.

It also doesn't work yet if the top level provenance recorder is one that has been dragged on (instead of turned on via the toolbar) -- I need to look into this.

re: comment#1, I just verified it works on linux too.

#3 - 06/15/2009 01:25 PM - ben leinfelder

retarget for release. sounds as though it can be closed [soon].

#4 - 06/19/2009 05:57 PM - ben leinfelder

the config dialog is not being shown now - so we don't really need to worry too much about this [for SANParks].
I'm going to close this so it's not cluttering up the bug list
