

Metacat - Bug #404

Create "CNAMEs" for LTER metcat and ldap

01/23/2002 11:24 AM - David Blankman

Status:	Resolved	Start date:	01/23/2002
Priority:	Normal	Due date:	
Assignee:	James Brunt	% Done:	0%
Category:	metacat	Estimated time:	0.00 hour
Target version:	Postpone	Spent time:	0.00 hour
Bugzilla-Id:	404		

Description

Create CNAMEs:

suggested names: ldap.lterknb.org or ldap.knblter.org,

metacat.lterknb.org or metacat.knblter.org

```
ldap.linternet.edu (for new internal ldap
dc=liinternet,dc=edu)
```

History

David -

I think you are a bit unclear on the concept. We're not creating a new domain for the ldap server - we are creating an alias within the lter domain. There's no reason to have another domain to manage for knb.

This is a convenience fix that I'll submit this week. These will initially point to quark - a Sun Ultra 10 that will be the knb server.

Moved issues that we do not intend to address during the current release to the 'Postpone' milestone.

#4 - 03/06/2002 11:25 AM - James Brunt

I've created the ip name knb.linternet.edu and have created the following CNAMEs to it for now:

```
knbl-ldap  IN  CNAME  knb.linternet.edu.
ldap      IN  CNAME  knb.linternet.edu.
metacat   IN  CNAME  knb.linternet.edu.
```

#5 - 03/29/2002 01:15 PM - David Blankman

I tried pinging metacat.linternet.edu, knbl-ldap.linternet.edu and ldap.linternet.edu and got the following:

```
Z:\>ping metacat.linternet.edu
Unknown host
metacat.linternet.edu.
```

```
Z:\>ping ldap.linternet.edu
Unknown host
ldap.linternet.edu.
```

```
Z:\>ping knbl-ldap.linternet.edu
Unknown host knbl-ldap.linternet.edu.
```

Check your name server setting - Space has not been updating DNS properly. It's on the list.

James
