Description

There is a problem when one tries to use Morpho to edit dataset files created using the nrs web page input and then opened in Morpho. It looks like the Morpho editor inserts some optional nodes in the wrong location, then does not remove them even if empty, and thus tries to submit an invalid document when the doc is edited. The error message also seems inappropriate. Details still need to be determined.

History

#1 - 02/04/2002 02:34 PM - Dan Higgins

There seem to have been 2 problems with the Morpho editor that caused this problem. In one case, empty nodes were not trimmed properly when edited documents were saved. A second problem was a fairly serious logic error in the method that merged tree structures. This error resulted in nodes being ordered incorrectly which made the edited documents invalid, causing problems sending these docs to Metacat. Both problems have been fixed with method changed to the DocFrame class.
