| Category: | documentation | Estimated time: | 0.00 hour |
| Target version: | 2.0.0 | Spent time: | 0.00 hour |
| Bugzilla-Id: | 4061 | | |
| Description | | | |
| <p>In the splash screen, none of the documentation links are active. Help -> About -> Documentation Brings up doc-index.htm That file has "Kepler Getting Started Guide" etc. None of the links are active. If we are not shipping docs, then how about a placeholder?</p> <p>Otherwise the user does not know that we are intentionally not shipping docs.</p> <p>This was replicated with the Installer under Mac OS X and in the SVN tree.</p> | | | |

| Blocked by Kepler - Bug #3949: Get the installer working with the new build s... | | Resolved | 04/06/2009 |

History

#1 - 05/12/2009 07:20 PM - Matt Jones

The previous build simply knew where to copy these from -- the pdf files needed are in kepler-docs. We should just augment the new build to add it in to the installer build.

#2 - 06/11/2009 09:50 AM - Chad Berkley

Fixed. The documentation is now copied into the installer unless copyDocumentation is set to false.
