Updated links, proof-read. Need NCEAS links to work. Sent email to shaun and rick asking about missing pdfs.

Waiting for Ben to review this section for any additional functionality, then this will be done.

#3 - 03/03/2010 03:16 PM - ben leinfelder

Reviewed the R appendix - some minor typos corrected, but no glaring omissions re: functionality. I was concerned about the BEAM example not going to run - but it still executes successfully.

As discussed with Chad, we need to be aware of how the R examples are included in the installed version of Kepler 2.0. A handful of workflows reference data files that are in the 'r' module ('r-2.0' for this release). It would be nice to not have to rework the examples each time we release the module (r-2.1, say)

Also, there are references made to the R demo directory in the text of the manual - we want to make sure those reflect what's in the installer for 2.0

Last thing: should we re-do screen shots so that the 2.0 changes to the GUI (mostly in the component search area) are reflected? I have not done this because I didn't want to introduce OS X shots in the mix of Linux (or are they Windows?) shots. Or do we not care about them being consistent?

#4 - 03/03/2010 03:42 PM - Chad Berkley

Originally, I had wanted to keep all of the screen shots consistent, however, it's going to take a lot of work to do that. What do people think of mixing screen shots from various OSs?

I agree with Matt, that is probably o.k., and it shows that we support different OS's. Also, so far what I have found in replacing the screen shots is

that there are many that just show the workflow canvas by itself and those don't have to be replaced. The ones that all DO need updating are any that show the component / data / outline panel, since the extra tab has been added, the search looks different, and the toolbar no longer has the full screen button in it.

The ones that all DO need updating are any that show the component / data / outline panel, since the extra tab has been added, the search looks different, and the toolbar no longer has the full screen button in it.

Also, I don't mind taking on the task of doing the screen shots for the rest of the docs. If that will be helpful.

Ok, thanks, Debi. The only thing left to do on this is update screenshots then. I've made a separate bug (bug 4867) for screenshots so I'm closing this one.
