

Morpho - Bug #4096

Must click tab twice to display metadata for table without read access

05/20/2009 06:44 PM - Jim Regetz

Description

This happens for me with a data package that has several publicly readable data tables, plus an additional table for which I don't have read access. When I click on the tab of the private table, Morpho gives two warning windows. After dismissing these, the table documentation shows the metadata for the first table in the DP, **not** the table I clicked on. After dismissing the warnings, I have to click the tab a second time to make the correct documentation for this table appear.

I see this with Morpho 1.7.0-RC3 on both Ubuntu 8.04 and Windows XP. However, on Mac OS X, the correct table documentation appears after the first click.

I know we have a bug that the time switching entity metadata will take very long time. Is it possible that you don't wait enough?

#2 - 05/21/2009 09:55 AM - Jing Tao

It turned out that it is not lag issue. Here are steps to reproduce the bug:

<regetz> search for "megaherbivore"

<regetz> choose the dp judithk.306

<regetz> then click the tab for "elephantadbuffalo2006.csv"

this is so odd - must have something to do with differences in the AWT events between the OSes. Looked into it a bit - the mouseRelease event on the tab that kicks off the metadata rendering is not being captured on the linux, but it is on the mac.

I suppose we could try initiating the rendering in an alternative location.
