Target version:	client-prototype	Spent time:	0.00 hour
Bugzilla-Id:	4110		
Description			
If you set the identifier column, and then click next, the correct column will be shown, but next will not be enabled.			

History

Sandeep, if you've got time to try to figure this out, it wouldn't hurt to try to figure this out. I suspect that looking at the "isNextEnabledInitially (name is approximate)" method of the class IdentifyStudentColumn would allow you to fix this one.

#2 - 10/07/2009 08:14 PM - Sandeep Namilikonda

I am unable to replicate the bug. When I select a column as student identifier, the "next" stays enabled.

#3 - 11/17/2009 01:23 PM - Sandeep Namilikonda

This issue has not surfaced lately, at least in the tests that Jay has conducted. The reason for the bug could probably be attributed to a faulty excel test file with incorrect column separation.

Hence, I am closing this bug.
