

EML - Bug #4117

squished rendering of some EML datasets

05/28/2009 01:03 PM - Jing Tao

Description

Margaret reported this issue:

Hi Duane and Jing -

I'm working with MCR to update a couple of their datasets. I noticed that this eml doc has a problem with the lter and knb skins where all the content if shoved over to the left in a narrow column. It is slightly wider in MSIE than in Firefox.

<http://metacat.lternet.edu/knb/metacat?action=read&qformat=ilter&docid=knb-ilter-mcr.10>

<http://knb.ecoinformatics.org/knb/metacat?action=read&qformat=default&docid=knb-ilter-mcr.10>

This also happens to some SBC datasets, but not all -- for example, knb-ilter-mcr.1 renders just fine. I'm pretty sure I've seen this in docs from other lter

sites as well, but I dont seem to be able to drum up any at the moment (i.e., by randomly choosing docids...)

Can you tell me what is going on?

thanks -

Margaret
