History

#1 - 07/01/2009 04:05 PM - Chad Berkley

created branch

<http://code.kepler-project.org/code/kepler/branches/release-2.0.0-pre-alpha1-branch/> for the release.

#2 - 07/02/2009 11:46 AM - Chad Berkley

Added new functionality to the build system. This is checked into the branch, but not into the trunk. Should probably be merged after this release is over unless David sees a better way to do what I did.

First, the change-to -Dbranch=... allows a suite to be checked out from a branch. Second, the change-to -DptolemyBranch=... allows ptolemy to be checked out from a ptolemy branch so that kepler can be released with stable ptolemy releases.

The method for getting the branch is now:

svn co <https://code.kepler-project.org/code/kepler/branches/release-2.0.0-pre-alpha1-branch/modules/build-area> build-area

ant change-to -Dsuite=wrp -Dbranch=https://code.kepler-project.org/code/kepler/branches/release-2.0.0-pre-alpha1-branch
-DptolemyBranch=svn://source.eecs.berkeley.edu/chess/ptll/branches/rel-8-0-beta

ant run

#3 - 07/10/2009 02:17 PM - Chad Berkley

Kepler 2.0.0-pre-alpha1 is now released. I've documented the build branching arguments in the build instructions here:

<https://kepler-project.org/developers/teams/build/documentation/build-system-instructions#running-and-building-from>
