Description			
The jars produced by 'ant jar' do not include any of the files in configs/.			

History

#1 - 06/22/2009 05:37 PM - Jing Tao

Here is the code from line 106:
dirs.add(module.getTargetClasses());
dirs.add(module.getSrc());
dirs.add(module.getResourcesDir());
//dirs.add(new File(moduleDir, "configs"));
//dirs.add(new File(moduleDir, "lib"));
//dirs.add(new File(moduleDir, "lib/images"));

we are wondering if we add a new line:
dirs.add(module.getConfigsDir());

#2 - 08/26/2009 02:01 PM - Matt Jones

Ptolemy requires configs to be at the root in the common module. In general we want all resources like configs to go in the resources directory. So, it's probably better to make it so that configs can be located in resources (rather than including configs).

#3 - 01/13/2010 10:41 AM - Chad Berkley

I found another bug (feature maybe?) with the jar task. the resources/configuration directory gets put at the root of the jar. I think it should go under resources still.

#4 - 01/14/2010 11:34 AM - Chad Berkley

I added the configs/ dir to the jar for the common module only.
