Kepler - Bug #4183

Kepler gives error on command+Q

06/24/2009 02:25 PM - Sean Riddle

Description

If I run with the following modules.txt:

wrp
workflow-run-manager
*reporting

I get the following error if I exit Kepler with the command+Q keyboard shortcut:

"Could not create tab pane.: ptolemy.actor.gui.Configuration"

I do not get this error if I close the last window of Kepler or if I use Kepler->Exit, and it shuts down cleanly in those cases.

History
