

Kepler - Bug #4187

When running with reporting suite, a blank canvas is considered changed and unsaved

06/26/2009 12:16 PM - Sean Riddle

Status:	Resolved	Start date:	06/26/2009

Bugzilla-Id:	4187		
Description			
When running with the following modules.txt: wrp workflow-run-manager *reporting if you close a new canvas, it prompts to save the window. This does not happen when running with the normal kepler suite if the canvas has not been altered. I suspect this behavior is caused by the integrated Provenance Recorder functionality that, behind the scenes, embeds itself in the MOML of the canvas immediately upon its creation. The behavior in these two situations should probably be unified.

we had this problem a while back - i thought i'd fixed it.
taking another look.

#2 - 08/06/2009 08:24 AM - ben leinfelder

i'm not finding this to be the case. tried on two installations of kepler (wrp suite)
