Description			
Need to make it a little easier to grab the report item panels. Because of the border layout in the panels, and the panel button behavior for the properties, etc., the user has to click in a pretty specific area in order to get the drag behavior. (Like on the border of the panel) for all but the label panels (they are easier because they use grid layout). Need to change all the panels to the grid layout, but keep their current appearance and function.

Moving this bug to the next release, since changing the layout will require some additional time to get the panels to look as they do now. Would also like to make the borders a little bit wider, but that will also require changing the way that we are drawing the panels.

Improved, and I think working fairly well, the user just has to grab somewhere in the panel that is not a button or a text field.
