Kepler - Bug #4208

Report Designer - dragging from the component window to the canvas does not drop where you want it

06/30/2009 11:01 AM - Chad Berkley

Bugzilla-Id:	4208			

Description

If you drag a component from the components pane onto the canvas between two components, the new component shows up at the bottom of the stack instead of where you dragged it, even though the mouse cursor turns to the + icon. Either the mouse cursor should not change or the component should be added where you drop it.
