History

#1 - 02/13/2002 01:48 PM - Dan Higgins

already in Bugzill

#2 - 02/13/2002 01:48 PM - Dan Higgins

bug already in system

#3 - 02/14/2002 03:39 PM - Dan Higgins

should be resolve_duplicate

#4 - 02/14/2002 03:42 PM - Dan Higgins

I cannot find the duplicate right now. Will leave in system

#5 - 06/13/2002 08:39 AM - Matt Jones

In addition to returning the original filenames (after checking for naming conflicts), we also need to produce an HTML export of the metadata that is complete and easy to read. This should be based on the new EML XSLT stylesheets linked together in a series.

#6 - 09/30/2002 12:10 PM - Matt Jones

also make sure it works i the data package frame

#7 - 09/30/2002 01:57 PM - Jing Tao

Also make sure synchronize and delete works in data package frame.

#8 - 09/30/2002 02:24 PM - Jing Tao

I think this bug is redundant to bug 613. So I mark it as duplicate.

- This bug has been marked as a duplicate of 613 ***

#9 - 10/23/2002 12:30 PM - Matt Jones

Need to deal with Comment [#5](#) where it was requested that data files be renamed as they were originally when the data is exported. This necessitates a check for file naming conflicts, as there is no guarantee that user-provided filenames are unique.

#10 - 10/25/2002 08:42 AM - Jing Tao

Now after exporting a package, the data file will be stored in a saperate directory - data and xml document will be stored in another subdirectory - metadata. The data file's name will be the original name rather than docid. If the file's names have conflict, the second one will be add a character '1' at the name. For example data and data1.
A style sheet - export.css is exported too. So the summary html file is looked much better.
