Description Dan and I have been discussing this today, and he's working on it. When a user creates a workflow, runs it a number of times, and then does a Save (not a Save As) and gives it a name, the plan is to rename previous runs that have the same Isid (and named UntitledN) to the new name. This will help keep their provenance store more organized, instead of having a slew of e.g. Untitled1 runs showing up in their Workflow-Run-Manager, many of which refer to different workflows.
